Organizing Committee

Valentina Ivanova, RISE Research Institutes of Sweden, Sweden
Patrick Lambrix, Linköping University, Sweden
Steffen Lohmann, Fraunhofer IAIS, Germany
Catia Pesquita, LASIGE, Faculdade de Ciências, Universidade de Lisboa, Portugal

Program Committee

Craig Anslow, Victoria University of Wellington, New Zealand
Nikos Bikakis, ATHENA Research Center, Greece
Kārlis Čerāns, University of Latvia, Latvia
Isabel F. Cruz, University of Illinois at Chicago, USA
Aba-Sah Dadzie, Open University, UK
Aidan Delaney, University of Brighton, UK
Marek Dudáš, University of Economics, Czech Republic
Roberto García, Universitat de Lleida, Spain
Alain Giboin, Université Côte d'Azur, Inria, CNRS, I3S, France
Anika Groß, University of Leipzig, Germany
Ali Hasnain, Insight Centre for Data Analytics, Ireland
Eero Hyvönen, Aalto University & University of Helsinki, Finland
Ali Khalili, Vrije Universiteit Amsterdam, The Netherlands
Paul Parsons, Purdue University, USA
Silvio Peroni, University of Bologna, Italy
Emmanuel Pietriga, INRIA Saclay, France
Harald Sack, Leibniz Institute for Information Infrastructure & KIT Karlsruhe, Germany
Daniel Schwabe, Pontifical Catholic University of Rio de Janeiro, Brazil
Kamran Sedig, University of Western Ontario, Canada
Ahmet Soylu, Norwegian University of Science and Technology, Norway
Gem Stapleton, University of Brighton, UK
Markel Vigo, University of Manchester, UK

Additional Reviewers

Ali Baigelenov
Ya-Hsin Hung

Preface

The Semantic Web enables intelligent agents to create knowledge by interpreting, integrating and drawing inferences from the abundance of data at their disposal. It encompasses approaches and techniques for expressing and processing data in machine-readable formats. All these tasks demand a human-in-the-loop; without them, the great vision of the Semantic Web would hardly be achieved. Meanwhile, visual interfaces for modeling, editing, exploring, integrating, etc., of semantic content have not received much attention yet.

The size and complexity of ontologies and Linked Data in the Semantic Web constantly grows and the diverse backgrounds of the users and application areas multiply at the same time. Providing users with visual representations and intuitive interaction techniques can significantly aid the exploration and understanding of the domains and knowledge represented by ontologies and Linked Data.

Ontology visualization is not a new topic and a number of approaches have become available in recent years, with some being already well-established, particularly in the field of ontology modeling. In other areas of ontology engineering, such as ontology alignment and debugging, although several tools have recently been developed, few provide a graphical user interface, not to mention navigational aids or comprehensive visualization and interaction techniques.

In the presence of a huge network of interconnected resources, one of the challenges faced by the Linked Data community is the visualization of multidimensional datasets to provide for efficient overview, exploration and querying tasks, to mention just a few. With the focus shifting from a Web of Documents to a Web of Data, changes in the interaction paradigms are in demand as well. Novel approaches also need to take into consideration the technological challenges and opportunities given by new interaction contexts, ranging from mobile, touch, and gesture interaction to visualizations on large displays, and encompassing highly responsive web applications.

There is no one-size-fits-all solution but different use cases demand different visualization and interaction techniques. The evaluation of such interfaces and techniques poses another relevant concern given the specific challenges of visualizing data imbued with semantic complexity. Ultimately, providing better user interfaces, visual representations and interaction techniques will foster user engagement and likely lead to higher quality results in different applications employing ontologies and proliferate the consumption of Linked Data.

These and related issues are addressed by the VOILA! workshop series concerned with *Visualization and Interaction for Ontologies and Linked Data*. The fourth edition of VOILA! is co-located with the 17th International Semantic Web Conference (ISWC 2018) and will take place as a full day event on October 8, 2018 in Monterey (CA), USA. It will be organized around scientific paper presentations and discussions, and will be accompanied by

interactive software demonstrations, giving developers a chance to gather feedback from the community.

The call for papers for VOILA! 2018 attracted 16 submissions in different paper categories. At least three reviewers were assigned to each submission. Based on the reviews, we selected 7 contributions for presentation at the workshop in the following categories: full papers (5), system papers (2).

We thank all authors for their submissions and all members of the VOILA! program committee for their useful reviews and comments. We are also grateful to Amrapali Zaveri and Elena Demidova, the workshop chairs of ISWC 2018, for their continuous support during the workshop organization.
