Preface

This proceedings volume collects the papers presented at the ICPM Demo Track 2019, which was part of the 1st International Conference on Process Mining (ICPM) in Aachen, Germany, held on 24-26 June 2019.

We invited submissions for demos to be included in the ICPM Demo Track to present innovative Process Mining tools and applications, originating from research initiatives or industry.

Each demo paper was reviewed by at least three members of the program committee. To be considered for the Demo Track, tools have been evaluated on the basis of relevance, novelty, and innovativeness to the Process Mining community. Previously demonstrated tools were also welcome if there was clear evidence of the value added to the previous version of the tool, such as new tool features and/or its adaptation and use for new practical applications.

This proceedings volume includes eight carefully selected papers presented at the ICPM Demo Track. We would like to thank all the authors, the members of the program committee, and the local organization team of the conference for helping in the realization of this volume.
